End to End Learning and Optimization on Graphs

Bryan Wilder\(^1\), Eric Ewing\(^2\), Bistra Dilkina\(^2\), Milind Tambe\(^1\)
\(^1\)Harvard University \(^2\)University of Southern California

**Learning** (e.g. link prediction)

Our layer...

1. **Learns** to solve graph optimization problems in a fully differentiable manner
2. **Matches or exceeds** hand-designed algorithms
3. **Enables end-to-end training** for learning + optimization tasks
